

## NETWORK RADAR

Network Radar is a SaaS Module built to help organize, automate and engage Partner, OnNet and NearNet networks. It allows carrier relations to manage their OffNet relationships with other operators by visualizing circuit inventory, building reach and searching for new networks to leverage.

### BUILDING LIST AUTOMATION

Designed for today's network partner provider to visualize their network assets - fiber routes and buildings - at all times; and keep that information current and accessible

### FIND NEW NETWORKS

Gain a market perspective with visibility; who has network clustering throughout the market?

### PUBLISH PARTNER REACH

Share transparently with all employees with an overview of the routes and buildings you can reach through partners. Track product and pricing.

### IMPROVED AVAILABILITY SEARCH

Ensure all building loaded follow a standard on-board validation, standardization and enablement.

Call or visit our website, and schedule a custom demo to see how Network Radar will change the way you do business.
