

**Our Platform**

**The Connected World** is a SaaS platform that combines account-based marketing and location intelligence with cutting-edge predictive algorithms. It enables the comprehensive and interactive visualization of network assets with market data that can be effortlessly updated, analyzed, tracked and distributed.

**The Modules**

**Building List Manager** - Moves network operators out of stagnant Excel files and allows them to create automated OnNet and NearNet building lists in real time.

**Building Intelligence** - Expands the location record to include detailed information on the tenant within the building and the competitive networks terminated to the building.

**Building Manager** - Documentation and tracking tool that manages activity associated with location, including Building Access Agreements, Easements, Laterals, Riser Cable and Demarcation Points.

**Network Radar** - A carrier relations platform for network operators to receive on-net and near-net building lists from partner networks. It also allows them to manage their off-net relationships with other operators by visualizing [off-net] circuit inventory and discovery for new networks to interconnect.

**Network Finder** - A search tool that allows users to look for the LEC (Local Exchange Carriers), cable companies and on-net fiber providers at a location. It then provides a profile of who those companies are and their product capabilities at that location.

**Network Intelligence** - Informs network operators of which service providers are located within their on-net and near-net building locations.

**Availability Engine API** - Allows users to publish their own branded API's to their clients, allowing them to share network location, product and pricing availability.

**Enterprise Profiler** - Presents a single screen outline of an enterprise, built specifically for the connectivity industry. Allowing network operators to search for a company by name and get an overview of their locations, network information, profile, news and key technology.

**Professional Services**

- NearNet Analysis
- Line of Site Analysis
- Diversity Studies
- Market Share Reports
- Record Conversions

**Boundary Services**

- Wire Center Boundaries
- MSO Boundaries
- LATA Boundaries
- NPA Boundaries
- Rate Center Boundaries
- MSA Boundaries

**Location Services**

- Location IDs
- Entity IDs
- Address Database
- Parcel IDs
- Address Validation
- Data Enhancement
- Address Appending
- Address Cleaning
- Geocoding Services
